Express Bi-folding Doors plays role in transformation of home

When the owners of a West London property decided to remodel it throughout to create an immaculate, top specification family home, they chose Express Bi-folding Doors for all the glazed products.

The company manufactured and installed aluminium windows and bi-folding doors among other features within what is now a stunning property. The front elevation of the house is a mixture of brickwork and rendered coating which looks great alongside the modern, solid front door and sidelight, and huge aluminium windows. The windows include the feature gallery window on the landing, and large casement windows on the front and rear of the house.

Inside it truly is an open plan setting worthy of a double paged spread in a lifestyle magazine. The front door leads straight through into the light filled kitchen and living area and out to the immaculate garden outside.

The flat roof extension has not only increased the size of the home but allowed the opportunity for Express Bi-folding Doors to install the products that truly bring the outside, in. The return of the extension boasts a two panel [XP View bi-folding door](#) which allows for the side of the house to be opened up but it is the rear elevation where the benefits of folding doors are truly showcased. The full width of the extension houses a [six panel XP View bi-folding door](#) which allows the whole space to be opened creating a fantastic setting to enjoy during the warmer months.

Six bi-fold door panels offer a great degree of flexibility in how it opens and operates, with essentially a French door making up the middle two door panels. This flexibility means one door can be opened as a traffic door. Two can be opened as traditional French doors, three can be opened creating a 50% clear opening if someone is cooking in the kitchen or relaxing in the living room, and finally all six panels can be completely opened creating a seamless link to the external patio and garden.

Internally the house has been finished to the highest standard with a beautiful floating staircase, stunning designer furniture, chandeliers and a top specification kitchen so it was important that the bi-folding doors and huge amounts of glazing within them could be screened whilst still complementing the modern, clean aesthetic inside the home. For this reason, [solar powered integral blinds](#) were used within the bi-folding doors. Powered by the external solar panel and complete with remote control, these striking gadgets are as practical as they are impressive, a no clutter-way to screen the doors that sits within and folds away with all the folding door panels.

The homeowners are delighted with the finished results, proudly sending Express Bi-folding Doors photos with a review of how happy they are with the products and service received.
