cladseal

Decorative Wall Panel Sealing Kit

Durable • Flexible • Hygienic • Attractive

Cladseal

BS 5385
Cladseal
Meets BS 5385
Recommendations

Why offer the beauty of decorative wall cladding and spoil it with an unhygienic eyesore?

THE BENEFITS

Flexibility

A bond-breaker releases the silicone off the inside walls of the trim allowing it to stretch for movement between the ledge & wall

Durability

The sealant is protected inside a durable trim from exposure to the modern hostile shower environment

Hygiene

The sealant is concealed and does not attract bio body wash & debris

Aesthetics

No exposed sealant, slime or mildew, just an unobtrusive seal that looks great!

HOW CLADSEAL WORKS

Each Cladseal strip has a green tape (the red line) applied to the inside face of the strip. Sealux-N silicone cannot bond to this tape after it cures. When joint movement occurs between the ledge and wall, the Sealux-N silicone simply releases off the green tape (under tension) and stretches to accommodate joint movement. All very simple!

Everything Included:

- 2 Strips (1.85mtr)
- 2 Sealants
- 1 Mitre Box
- 2 End Caps
- 1 Spatula
- 3 Wipes

Easy to fit

With easy to read illustrated instructions

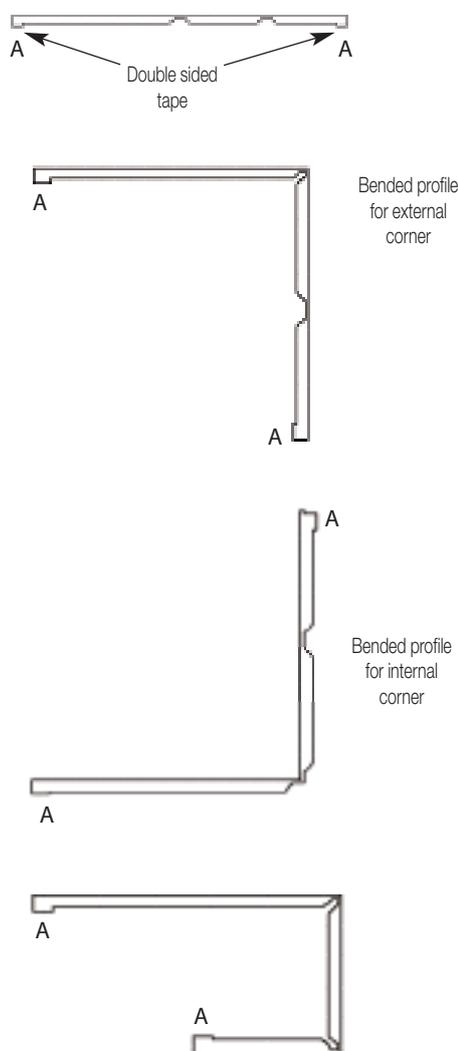

multi purpose trims

1. Remove protective tape A. before installation.
2. Bend once at appropriate flexible joint for required finish (repeated bending will result in cracking of trim).
3. In shower or wet areas additional silicon should be applied to multi purpose trim.

Colour matched for the following ranges:

■ Marmo, Carrara, Craquele and Shining White

available in high gloss white for all other applications.

fitting instructions

Our easy to follow installation guide is provided with each pack so you get the best from your decorative panels

installation

PVC Panels are easy to install. Provided the wall surface is completely flat, you may glue/silicone the panels to the wall. If not you can either staple, nail or screw the boards on wooden battens. In rooms with a high humidity treated wood and stainless steel fixings should be used. Extra insulation can be installed between the battens.

1. In case you decide not to glue the panels to the wall, you start by placing wooden battens approx. every 30 cm. To install the panels vertically, place the battens horizontally and vice versa.
2. Continue by measuring the number of panels you will need for the wall or ceiling. If the last panel is too narrow, we advise to saw the first panel so that you have at least 4 cm on either side.
3. Start by fixing the start and edge trim (no 9) around the surface you want to decorate. Insert the first panel into the trim. Make sure the first panel is placed perfectly straight (using a spirit-level or a thread with weight) before stapling, nailing or screwing the lip onto the batten (every 30cm). Leave about 5mm clearance between the panel and the edge trim. A fine tooth saw is recommended for cutting the panels to size.
4. Insert the second panel completely into the groove before stapling (nailing or screwing) into the lip. Proceed in the same way with the next panels. For the finish you can also use the internal corner profile (profile no 4V), the external corner (profile no 17V) and/or the centre joint (profile no 10).
