Arboles UK kicks off the school laboratory refit season

The sun is shining (sort of), and the school doors have closed for the summer. This can only mean one thing—the school laboratory refit season is upon us! Arboles UK is at the forefront as laboratory furniture manufacturers gear up for the busiest time of the year. With the new academic term on the horizon, Arboles UK's industry-leading lab taps are being installed in schools across the nation, ensuring that classrooms are equipped with the best for the upcoming school year.

This is also the time when Arboles UK receives a surge of inquiries about the best products to use and compatibility questions. With over 25 years of experience in the industry, Arboles UK understands the trends, knows what customers need, and has the technical expertise to back it up. Whether you are facing a standard refit or a unique challenge, Arboles UK has seen it all and is ready to provide the ideal solution.

Here is a quick guide to some of the key components typically used in school laboratories:

Laboratory Water Taps

The laboratory water taps come in three styles, all configurable for hot or cold-water usage:

- The Pillar Bib tap is an ideal water supply solution for classroom environments. Made of solid brass, the tap features a strengthened shank, removable nozzle, and an integral anti-rotation pin, making it a robust and durable piece of laboratory equipment.
- The Swan Neck or Gooseneck Laboratory tap is the most popular choice, especially for school labs. These taps can be fixed in place for added durability or designed with a moveable neck. Arboles UK's 902103 model is a reliable option that continues to be a top seller.
- Laboratory Mixer taps come in two designs. The monobloc mixer tap and the 'H' pattern or sometimes called a bridge mixer are the style we offer. The 900115 monobloc mixer and the 900078 are the most popular models as they come with an aerator nozzle which help reduce the splash back from the sink.

All Arboles UK's lab water taps are WRAS certified and come with a five-year warranty.

Laboratory Gas Taps

Arboles UK specializes in drop lever laboratory gas taps, a design that has proven its durability and reliability over the years. The drop lever not only ensures longevity but also acts as a visual indicator, allowing teaching staff to quickly identify if a tap has been left on. Arboles UK's four popular models are trusted in laboratories worldwide and come with a five-year warranty and the prestigious BSI British Gas accreditation.

Ceramic Sinks

No lab is complete without durable sinks. Arboles UK provides high-quality Belfast and Larch laboratory-style ceramic sinks that are stain, odour, and impact-resistant, available in a range of sizes to meet all your needs.

Vulcathene Chemical Drainage System

Arboles UK also offers the Vulcathene Chemical Drainage System, the world-leading lab drainage product. Renowned for its exceptional performance, this system is essential for any serious laboratory fit-out. If you are uncertain about your specific needs, the experts at Arboles UK are here to guide you.

Pedestal Boxes

Looking to house electric points, data points, or USB ports? Arboles UK offers four styles of pedestal boxes that match the RAL code of our taps for a seamless look. With pre-drilled holes and an earthing point, these boxes are designed to save time on-site.
