Viking Balcony Systems Debuts at Ecobuild 2012

Viking Balcony Systems makes its debut on Stand S180 at Ecobuild 2012 with a stunning range of innovative, cost-effective and low-maintenance glass balustrades, stylish Juliet balconies and distinctive curved sliding patio doors.

VBS, a sister company of Balcony Systems, specialises in the supply and installation of market-leading transformative products that add value to properties, while enhancing natural light and feelings of spaciousness within them.

VBS provides a comprehensive professional design, onsite supervision and warranty-backed installation service, working closely with main contractors, architects and individuals on all types of newbuild and refurbishment schemes. Projects range from private homes to large residential and commercial developments, which are supported with full after-sales care.

Manufactured from glass and aluminium, both fully recyclable materials at the end of their useful lives, all straight or curved glass balconies, balustrading and thermally-efficient curved patio doors are supplied and installed to exact client specifications.

An optional self-cleaning, doubled-sided glass coating is also available across the entire product range. Providing complete protection from the elements, this patented coating keeps the glass cleaner for longer, dramatically reducing cleaning cycles while eliminating the need to use harsh chemicals.

For more information, contact VBS on 01158 718120 or enquiries@vbs-ltd.com
