Bryn Thomas invests in crane fleet

Bryn Thomas Cranes has continued to invest millions of pounds into its fleet with the purchase of a further four Liebherr cranes. These cranes include a 500 tonne Liebherr LTM 1500-8.1, a 70 tonne Liebherr LTM 1070.4.2, a 55 tonne Liebherr LTM 1055.3.2, and two more additional 40 tonne Liebherr LTM 1040.2's.

The second crane delivered in 2018 was the 70 tonne Liebherr LTM 1070.4.2 pictured, which entered service in February.

Bryn Thomas Cranes is also looking to further consolidate its presence in the UK across all sectors including construction, civil engineering, rail infrastructure, marine, and the oil and gas industries. This investment is also part of a larger project to inline the company's operating fleet into two crane manufacturers.

Managing Director Dylan Thomas said: "Adding these cranes to our fleet ties in with our targeted growth strategy across all sectors and operating areas. We are fully committed to increasing the Liebherr inventory of cranes throughout 2018 and beyond.

"There is no doubt that Liebherr is at the forefront of the latest crane technological advances which can only benefit our ambition to be the best in key areas such as health and safety. The purchase of the 500 tonne Liebherr crane supports the company's further ambition of growth in the heavy cranes sector. We will also be taking delivery of another heavy crane in the coming months and these two additions will undoubtedly help further build this sector and allow us to continue to further penetrate the heavy crane market."
