CPM Redi-Rock walling gains quality award recognition

CPM's Redi-Rock™ modular precast concrete blocks has received CE Marking, ensuring that the aesthetically pleasing walling complies with the essential requirements of the European health, safety and environment protection legislation.

The European Conformity Marking is just another successfully achieved standard, that the easy to install Redi-Rock™ has obtained, alongside the BBA (British Board of Agrément) and the British Standards Institute PAS 68 certification for Vehicle Security Barriers.

Paul Cartwright, Commercial Director UK for the CPM Group, believes that the CE Marking gives the customer extra confidence in using the Redi-Rock™ walling, commenting: "As a leading manufacturer of precast concrete products, our objective is to offer our customers a modular walling system that is consistently manufactured to high standard and by achieving the CE Marking, the BBA and PAS 68 we confirm we do this.

"We pride ourselves on our high levels of service that includes a full design and installation support service, as well as offering free retaining wall engineering analysis software at www.cpm-group.com for our Redi-Rock™ modular walling."
