Causeway's Hat Trick in 'The Hammers'

Causeway Technologies has won through in no fewer than three categories in the Construction Computing Awards 2010 ('The Hammers') – E-Commerce Product of the Year, Mobile Technology Product of the Year and Environmental Project of the Year – as well as being one of the top two Companies of the Year.

Causeway CEO Phil Brown commented: "These results are clear recognition of our ability to combine innovation, quality and customer service to deliver solutions that add real value. The fact that our success is the result of nominations and votes from our customers is particularly gratifying."

Winner of the E-Commerce Product of the Year, for the second year running, was Tradex, Causeway's leading electronic trading solution, which enables the fast, efficient exchange and management of electronic trading documents between supply chain partners.

Tradex is also at the heart of the winning Environmental Project, helping equipment and support services provider Speedy significantly reduce its use of paper documents and associated environmental impact. The electronic trading solution developed jointly by Causeway and Speedy has also improved Speedy's service to its customers while also driving down costs.

Winner of the Mobile Technology Product category was Causeway's Vixensoft Mobile Solution, which delivers unprecedented management control of mobile workforces. Continuous innovation and investment in Vixensoft Mobile has maintained the product's leading position in managing field service operations.
