Clos-o-Mat complete service helps achieve value engineered solution in hygiene

A unique service is helping contractors achieve optimum effectiveness in value engineering for accessible toilet provision.

Under latest Regulations, it is desirable that buildings to which the public have access feature a hygiene room, or Changing Places, assisted accessible toilet facility. As the concept is comparatively new, few building services companies fully appreciate the breadth of equipment and associated ancillaries required. This puts strain on timescales and budgets.

Clos-o-Mat is the only disabled toilet provider that can, in-house, provide a value engineered solution. It can, through one source, provide design advice, supply, installation, project management and on-going service/maintenance across ALL the equipment needed.

“Because the room is a toilet, there is a misconception that any plumber can fit it. But it contains more than a WC; it has a hoist, a big changing bench, it needs electricity as well as a water supply, it needs load-bearing walls ... if not understood, these cause significant delays and cost to the project,” says Clos-o-Mat hygiene rooms/Changing Places project manager Kelvin Grimes.

“We deal with every element of these toilet facilities day in, day out. Thus we have the knowledge and expertise to ensure time and effort is not wasted, and the progress of the project is kept on track as far as possible – all key factors in the value engineering process.”

To access Clos-o-Mat’s project management facility for hygiene rooms and Changing Places, and thus optimise value engineering in at least this element of a build, visit www.clos-o-mat.com and its relevant hygiene room and Changing Places sections, or contact the office on 0161 969 1199.
