New practical guide released by Flakt Woods

Fläkt Woods Senior Fire Safety & CFD Design Engineer, James Allen, has released another technical white paper, which is available for free download.

The latest valuable guide is titled: Fire Smoke Venting – a practical guide to smoke control for enclosed car parks.

James stated: "The reason I wrote this paper is that there seemed to be an absence in manual calculation methods to design car park ventilation systems, specifically with jet fans, where the objective of the system is to achieve smoke control.

"As a consequence to this we regularly see smoke control designs that are based on air change rates which for some systems do not work due to insufficient airflow."

The free download can be accessed by filling in details on this link
