Forticrete's linear bricks specified for cottage extension

Forticrete's decorative Linear bricks have been specified for the construction of a 250 sq ft single storey extension at an awe-inspiring, 4-bedroom cottage in Reigate, Surrey.

Situated in an attractive semi-rural setting just a stone's throw from North Downs, the modern design of the period house's extension is complemented by the internal and external use of a number of natural materials. The extension features large openings that have been strategically placed to capture stunning rural views as well as permeating the space with natural light.

As project architects, Jason Good Architecture, specified Forticrete's Shot-Blasted Linear bricks in Ivory to create a bold, sweeping horizontal effect across the cottage's external façade.

Jason Good, Director at Jason Good Architecture, commented: "Forticrete's Linear range provided us with a distinctive tactile material that had the flexibility to be used both externally and internally; whilst retaining the beauty and longevity of traditional brick.

"Forticrete's Shot-Blasted finish in Ivory was unique in appearance, providing us with the ideal texture and colour to replicate the chalk substrate of the North Downs hills – we are very happy with the finish."

Forticrete's Linear range is available in 22 finishes in lengths up to 440mm and depths of either 65 or 55mm, which accentuates the linearity of any façade.

The comprehensive collection includes several variations of Forticrete's Venezia™ Burnished, a subtly burnished finish ideal for smooth natural stone appearances; its Florentine® Polished, a polished finish ideal for broad, glossy expanses of modern, reflective and decorative walling; and its Shot Blasted finish, which provides a natural weathered appeal.
