GEZE UK Adopts sustainable packaging

GEZE UK has reinforced its commitment to sustainability and operational efficiency by installing three state-of-the-art packaging solutions from Ranpak at its Fradley headquarters. The FillPak TT, PadPak Guardian, and Geami Wrap 'n Go™ systems are designed to enhance packaging processes, reduce waste, and minimise environmental impact, while ensuring the safe delivery of products to customers.

FillPak TT: Smarter void filling for secure shipments

The FillPak TT is an innovative void-filling machine that utilises paper filler material to stabilise and protect products during shipping. By securely locking items in place within the box, the FillPak TT reduces the risk of damage caused by impacts or vibrations.

This efficient and reliable system dispenses paper filler on demand at high volumes, enabling GEZE UK to reduce its packaging material usage. As a sustainable alternative to plastic fillers previously used, the FillPak TT aligns with GEZE UK's commitment to reducing its environmental footprint.

PadPak Guardian: Advanced cushioning for fragile items

The PadPak Guardian provides superior cushioning to protect fragile items from shocks and vibrations during transit. Its compact design and fast-loading system allow paper to be replenished in as little as 20 seconds, significantly improving packing efficiency.

When minor disruptions occur, such as a paper jam, they can be resolved quickly with a single button, further reducing waste and downtime. By adopting the PadPak Guardian, GEZE UK has streamlined its packaging processes and enhanced product protection.

Geami Wrap 'n Go™: Innovative protective wrapping

The Geami Wrap 'n Go™ system transforms die-cut kraft paper into a 3D honeycomb structure, offering exceptional protection against scratches and surface damage. This adhesive-free, modular solution enables GEZE UK to wrap items securely while meeting specific packaging requirements. By eliminating the need for additional materials such as tape or cutting tools, the Geami Wrap 'n Go™ adds efficiency and sustainability to GEZE UK's packaging operations.

A commitment to excellence

Kaz Spiewakowski, Managing Director of GEZE UK, expressed enthusiasm about the new installations:

"I am delighted to see the installation of our new packaging system, which enhances our production efficiency and sustainability credentials. These improvements not only reduce our environmental impact but also minimise the risk of damage during delivery, ensuring that our customers receive their products in perfect condition."

By investing in these cutting-edge solutions, GEZE UK continues to lead the way in adopting environmentally friendly practices while maintaining the highest standards of product protection and customer satisfaction.
