Timeless Quality with Glass Houses Conservatories

It is the ambition of most families to increase their living space and traditionally people would take a step up the housing ladder to do this. However, with the current uncertainty in the property market people are staying put and extending their existing homes. A popular way of creating that valuable space is to add a glass extension in the form of a conservatory or orangery.

"A well designed conservatory will change the way you live," says Jeremy Uglow of Glass Houses. "Not only do you gain extra living space and an abundance of natural light but you will have year-round views of the garden which, thanks to the latest glass technology, can be enjoyed even during the cold, snowy months."

Many clients investing in a conservatory are now taking advantage of the exceptional value Glass Houses offers if they choose to replace their windows and doors to match their property's glass extension. Traditionally styled and built to the same high standard as the company's orangeries and conservatories, the windows and doors are made using CNC (computer numerical controlled) technology. It enables more accurate engineering and speeds up the manufacturing process, allowing Glass Houses to pass cost savings on to their clients. CNC technology is used by the world's most admired manufacturers, including Rolls-Royce.

Every Glass Houses garden room is individual and designed to echo the style and period of the home. Where doors and windows are included, they too are designed to reflect the individual style of the home and its new glass extension, ensuring complete aesthetic harmony.

With building work difficult to price and most companies employing sales staff with limited technical knowledge, Glass Houses is unusual in offering a fixed price up-front with a 10-year guarantee and full project management, from groundwork to final finishes, for customers in the South East of England. For clients outside this area, Glass Houses will work on a design and fit basis using local contractors for the additional building works.

Based on the Surrey-Hampshire border, Glass Houses pays great attention to detail in producing fine, bespoke timber conservatories, orangeries and pool houses with a timeless quality.
