## **Hansgrohe Shows that Good Design can be Eco Friendly**

***Hansgrohe will once again exhibit at Ecobuild on Stand S551 with a stylish selection of water-saving showers, taps and thermostatic mixers demonstrating that no compromise in design or quality is required in order to save water in the bathroom.***

Hansgrohe also produces a successful grey water recycling system called Pontos AquaCycle, which launching at Ecobuild, has been re-engineered to incorporate rainwater utilisation and heat recovery. Designed as a modular system, Pontos AquaCycle takes water from the shower and bath and recycles it for flushing toilets and urinals, cleaning, washing clothes and watering gardens; now working in tandem with this process Pontos HeatCycle saves up to 20% of the energy generated to heat the water, thus making this combined system a great solution for modern sustainable buildings.

Pictured is the Crometta85 Green hand shower, winner of Environmental Product of the Year, which features EcoSmart technology allowing great performance with reduced water flow.
