## **Knauf AMF Ceilings Offer a Warm Reception**

***Knauf AMF ceilings have recently been specified for the main reception of an office building in Leeds, where Zurich Insurance has its regional offices. The 200m<sup>2</sup> area was fitted with new Thermoform Symetra tiles as part of an overall office refurbishment scheme, following a recommendation by Ormesby Ceiling contractors.***

Thermoform Symetra was chosen specifically to create a look similar to that of a metal ceiling but in a lightweight mineral tile. Thermoform Symetra is a white ceiling tile with a choice of diagonal and vertical surface perforations that create attractive geometric effects. A wide range of perforation sizes and hole centres can be produced, as well as bespoke perforation patterns.

Available as both tiles and planks, in a range of edge details and module sizes, Thermoform Symetra offers architects and designers even greater flexibility and scope for contemporary ceiling design. Performance is not compromised as the Thermoform Symetra range provides high levels of sound absorption, good fire protection and excellent light reflection.

Their high quality finish makes Thermoform Symetra tiles ideal for installations where aesthetics are an important factor such as office reception areas, retail outlets, restaurants, and other spaces that need a distinctive and creative ceiling expression. Thermoform Symetra tiles are lightweight and robust, making them very easy to cut and they allow full access to the ceiling void once installed.
