Parapan® is perfect for the work environment

Parapan® is the perfect material to use to create a contemporary office space. Not only is it easy to keep clean but is also durable and UV stable. The "mirror like" qualities of Parapan® create an illusion of extra space and the limitless design ideas and curve ability enable the most innovative designs to become a reality.

Available in 18mm thickness for doors, drawers and panels and 4mm for cladding and screens, Parapan® can be cut to bespoke sizes and thermoformed into curves and fitted with a choice of edge treatments and finger pulls or any style of handle for doors and drawers.

With a choice of 24 exciting colours to choose from differentiating your office space and continuing your company branding throughout your business is now possible.

Designed by British Thornton, the open plan office and breakout environment pictured above provides a spacious, airy working environment. Featuring Vista + touchdown benches, screens and reception counters; all of which utilise the bold, striking aesthetic of Parapan® in Lime and Hot Pink.
