## **Jakob at Lake Garda cycle path Italy**

***Jakob Rope Systems has showcased its innovative approach to safety and design with its contribution to the Lake Garda Cycle Path in Italy. This project highlights how Jakob's Webnet Balustrade can seamlessly combine security with aesthetics, offering a solution that protects while preserving the natural beauty of the environment.***

The Lake Garda Cycle Path, spanning from Limone sul Garda to Corno di Reamol, is a dream destination for cyclists. With its elevated routes and panoramic views of one of Europe's most picturesque lakes, it provides a breathtaking experience. Jakob's Webnet was chosen for this project due to its near-invisible design, which ensures uninterrupted views while maintaining the highest safety standards.

This is not the only location where Jakob's Webnet has made an impact. The material has been utilised in prestigious projects worldwide, such as the Queen Elizabeth Olympic Park in London, the High Line in New York City, and the First Cliff Walk in Grindelwald Switzerland. Its durability, strength, and minimalist design make it a preferred choice for architects and designers seeking functional yet visually unobtrusive solutions.

Architects working on pedestrian bridges, parks, or walkways can benefit from the versatility of Jakob's Webnet. It is low-maintenance, incredibly robust, and enhances the beauty of its surroundings without overpowering the design. This innovative material allows designers to create spaces that feel open, safe, and deeply connected to the natural world.

The Lake Garda Cycle Path is a striking example of how Jakob's Webnet transforms outdoor spaces, delivering safety and elegance in equal measure. By integrating Webnet, designers can achieve a harmonious balance between functionality and aesthetics, ensuring their projects are as beautiful as they are practical.

For more information on Jakob's Webnet Wire Mesh Safety System, specifications, or technical advice, contact their team. They are ready to assist with solutions that bring together safety, innovation, and design.
