## **Service Excellence from Mumford & Wood Includes Full Installation Facility**

***Mumford & Wood, the leading specialist manufacturer of bespoke, high performance windows and doors in traditional and contemporary designs, now offers an extended customer facility which includes a complete installation service as the alternative to a supply-only arrangement.***

This new facility has been launched by Essex-based Mumford & Wood to meet the growing demand from end-users and developers for a complete supply and fit service. The specification of Mumford & Wood's windows will include an initial site survey and technical assessment with the assurance that installation will be carried out to Mumford & Wood's industry-leading standards.

"The problem a homeowner will face when they decide to specify and purchase timber windows and doors is: 'who will survey and install them?'" says Chris Wood, Sales & Marketing Director, Mumford & Wood Limited. "The expertise required to technically assess and install replacement windows, or indeed an installation in a new-build project, must not be underestimated. The decision to choose Mumford & Wood to manage a complete project will give assurance to many customers who agree that the final installation should be our responsibility. This service provides customers with confidence and our insurance-backed commitment."

As specialists in the manufacture of bespoke period sliding sash windows, entrance doors, doorsets and bi-fold doors, Mumford & Wood know that correct and accurate installation is essential for their smooth and trouble-free operation. "In new build projects we normally work with well constructed facades that have accurate and clean openings which are perfect for new window installations but in older properties, where a lot of our work is carried out, Mumford & Wood's technical expertise is fundamental to ensure that the needs of the customer are met. Accurate measurements and site assessments, together with flexible manufacturing methods, ensure that bespoke windows are made to fit – every time!"

Mumford & Wood's fully factory finished, double glazed windows are BSI 'A - C' energy rated, provide high thermal and acoustic performance, ensuring reduced energy costs and CO<sup>2</sup> emissions. Products

are made from premium clear-grade, laminated timber which provides strength, stability and reduced maintenance cycles.
