Niftylift Receives Significant Order for V130Ts

Milton Keynes based access manufacturer Niftylift is pleased to announce that it has received an order for 23 of the successful V130T telescopic boom sets V130Ts mounted on Land Rover 110 chassis.

Selected due to its **GVW of just 3.5 tonnes** while still offering a useable **payload of 200kg**, the customer also specified for each V130T to include a dedicated stainless steel toolbox and four polycarbonate outrigger spreader plates for further operator protection.

Niftylift has continued production of the V130T since taking back the in-house manufacturing of the units, and continues to offer a competitive and well-proved design.

The timely completion of each of the recent scheduled deliveries has had to work around vehicle availabilities, winch installations and vehicle additions before the platforms can then be mounted at the Milton Keynes production facility.

Steve Beckwith, Niftylift Operations Director, said: *"The timing of the recent order has been ideal for us and we very much appreciate the continued support of customers, particularly with our ability to accommodate a surge of vehicles within our dedicated production cell."*

The V130T is available on a range of chassis options, depending on customer preference and each variant then carries a separate CE approval for that type.

For more information on the V130T or any other Niftylift product, please call 01908 223456 or visit www.niftylift.com
