Protec is a Winner for School Sports Hall

The property management company that took control of Headlands School in Bridlington, Yorkshire, inherited a leaking roof over the sports hall. The roof consists of composite panels that included insulation to building regulation standards. However, the single ply waterproof membrane had failed. As a result, water ingress had been a long term problem that had caused disruption for the school.

Requiring a cost effective and long term waterproofing system, the client turned to Polyroof Products Ltd for to provide the solution. The BBA-approved Protec system was specified for the project and was applied direct to the existing failed waterproofing membrane, allowing the school to continue without disruption.
