

Press Release
June 16th 2014

Q-railing is a great match for football

Staff at Q-railing are watching World Cup matches with an especially keen eye – proud that two of the stadiums being used in Brazil feature a stunning 25,000 metres of Q-railing balustrade systems!

The ESTÁDIO DO MARACANÃ in Rio de Janeiro (pictured) features 16,000 m of Q-railing balustrades. Products used include [Easy Glass® Slim](#), [Easy Glass® 3kN](#), [Q-line](#) and [Q-handrail](#).

At the ARENA AMAZÔNIA in Manaus, there is a further 9,000 m of Q-railing's innovative stainless steel system. Products featured here are [Easy Glass® Slim](#), [Easy Glass® 3kN](#), [Q-line](#) and [Q-handrail](#).

Installing Q-railing balustrades in a stadium project means achieving top scores for safety, design and a perfect view of the field. Choose from a variety of glass and baluster systems that are ideal for use in highly demanding public areas. Check out your options at www.q-railing.co.uk or place an order in the Q-railing [webshop](#).

In addition to the two World Cup stadiums in Brazil, Q-railing's systems have also been installed on stairs, stands and in the concourse of stadiums such as the British Britannia Stadium in Stoke-on-Trent, the Brazilian Allianz Parque (São Paulo), the Dutch stadiums Amsterdam Arena and the Euroborg (Groningen) and the Polish European Championship Municipal stadium (Wroclaw).
