## Lagune® Enables Tea at all Times on the Rooftop Terrace at Selfridges

***A RENSON® Lagune®, external fabric shading system was installed on the roof of Selfridges in Oxford Street in London. The terrace covering enables the customers of the Daylesford rooftop Café to dine or have a tea 'alfresco', without having to think about sun, rain, wind or coldness.***

The space was transformed into a roof terrace café allowing the highest afternoon tea on Oxford Street or a round of crazy golf on a temporary 9-hole golf course. This rooftop café is open daily from noon until 10 pm, allowing customers to dine outside while watching the rooftops or the sunset over London.

Given the famous unpredictability of the British weather, Selfridges was keen to ensure people would be able to enjoy its roof top, come rain or shine. Selfridges found an appropriate solution using the RENSON® Lagune®.

RENSON® installed a covering of 20m by 5m to create a more usable space. According to Daylesford, this Lagune® has allowed them to use the terrace during all of the 2012 summer's weather conditions and to serve more people – an important benefit.

Lagune features include:

- A patented aluminium construction
- Waterproof and translucent sun screens in the roof structure
- Concealed water drainage
- Wind-resistant sun protection with Fixscreen® technology
- Integrated wind-resistant screens with Crystal vision windows
