

Press Release
3rd June 2010

Revetment to release new NRV Flusher

Prototypes of the NRV Flusher will be available towards the end of June.

Anyone interested in participating in field trials should contact enquiries@revetment.uk.com or call us on 0844 8044 046.

The NRV Flusher is a push fit unit that goes into an existing manhole and will be available in 4", 6" 9" and 12" versions.

As well as providing a non return valve function to prevent back flow of sewage in the event of flooding its main function is to constantly flush out the sewer to prevent blockages and greatly reduce the build up of fats, oils and greases (FOG).

Using the considerable potential energy that exists within the sewer to clean itself is a truly revolutionary, environmentally friendly solution that will greatly reduce water company's maintenance bills.

Ends

12 Bridge Wharf
156 Caledonian Road
London
N1 9UU
