## **Rockpanel introduces new Instruction Guide and Product Range Guide**

### ***Two useful documents for contractors***

***Rockwool B.V. / Rockpanel Group is launching two easy-to-use documents for contractors: the handy Instruction Guide and the compact Product Range Guide. By following the clear instructions set out in the Instruction Guide, contractors can ensure they get the most from our high quality cladding materials and tongue and groove products. The Product Range Guide offers a complete list of the standard products stocked by Rockpanel. With the handy Instruction Guide and the compact Product Range Guide, contractors have all the information they need about Rockpanel at their fingertips, condensed into two usable documents.***

The Instruction Guide is a complete reference document for contractors on how to work with Rockpanel® cladding materials. The handy guide covers topics such as storage, handling, tools, installation guidelines and construction detailing. By following the simple guidelines, contractors can install the products effectively to ensure the most beautiful and long-lasting end result.

The Product Range Guide contains a comprehensive list of the standard Rockpanel product range. In addition, this compact guide provides information on the available finishes and colours, delivery times, accessories and guidance regarding the wide range of products available from Rockpanel. The guide provides contractors with all the information required about the extensive standard colour and product options available from Rockpanel.

**Editors notes:**

1. A subsidiary company of Rockwool International, Rockpanel produces durable board material made from basalt stone.
2. The products have been used for many years in a number of countries across Europe and beyond, mainly for exterior cladding in ventilated constructions, in particular for the aesthetic finishing of facades, soffits and fascias, and detailing.
3. The durability of stone and the workability of wood are combined in Rockpanel products. The products fit effortlessly into sustainable developments such as the passive house, and in addition accommodate contemporary architectural trends such as stratification and organic shapes, with a strong emphasis on costs and installation time.
