## **RonaRoad GreenPatch Pothole Repair working at Minus 23 degrees**

***Aberdeenshire Council took Ronacrete up on its offer to trial RonaRoad GreenPatch Pothole Repair on a local authority road and as a result is now using the product for pothole repair with very pleasing results.***

Although there was initial scepticism about how well a cold lay product would work in a Scottish winter, RonaRoad GreenPatch performed well in the trials and remained pliable throughout.

However its true effectiveness was put to the test when RonaRoad GreenPatch was successfully used to repair a really large pothole on the A944 in the Highlands at the incredibly low temperature of minus 23.5 degrees C. The council is also impressed by the convenience of RonaRoad GreenPatch Pothole Repair for emergency repairs because no heavy plant is necessary in its installation. Road repair crews simply have to pick up as many buckets as are required and take them to the site.

Ronacrete is happy to supply local authorities a free-of-charge supervised demonstration of RonaRoad GreenPatch Pothole Repair (this must be on a local authority road). There is no obligation to make a purchase unless, as with Aberdeenshire council, GreenPatch is believed to be the right pothole repair product.
