Simonswerk's Online Product Selector Makes Choosing the Right Hinge Simple

The new ProductSelector function on the SIMONSWERK UK web site takes all the headaches out of selecting the right hinge. Designed to guide specifiers through the whole process by a simple series of filters about the door, application, frame and rebate, the new SIMONSWERK ProductSelector makes the process of honing in on the correct hinge quicker and easier than ever.

With just one click from the SIMONSWERK UK home page (<http://www.simonswerk.co.uk/>) the user is asked to select a few details about the door weight, special functions, leaf type, rebate, and application – which will then throw up a selection of suitable hinges for the job. Even if not all the door information is available, the SIMONSWERK ProductSelector will still offer details of the appropriate hinge to use.

All the technical information needed for specification, load capacity, adjustment and dimension, is there at a glance. Product photos, views, finishes and cross sections are also provided. From there it is simple to download product information, CAD-drawings, routing data and descriptive texts for tenders free of charge.

Backed with UK award winning customer service SIMONSWERK is Europe's leading manufacturer of top quality brass, aluminium and stainless steel hinges for doors and windows. They provide the architectural ironmongery and builder's hardware industries with high performance hinges including the outstanding fully concealed TECTUS and the TRITECH solid brass concealed bearing ranges.
