South Survey releases Newest OrthoGraph handheld surveying software

The latest version of OrthoGraph's Windows Mobile surveying software has been released!

Offering many new features, OrthoGraph is developing handheld-based surveying solutions and is on the cutting edge of the changing AEC market. Orthograph 2.0 has many new exciting capabilities which make it even easier and faster than ever to survey any room or building. Enjoy the convenience of onsite analysis, as well as real time values for area, perimeter, object details, etc.

New Features on OrthoGraph 2.0:

- Compatible with Leica's new DISTO D3a BT
- Ease of use of large drawings containing more than a 1,000 rooms together with objects on-site
- Support of high resolution PDAs
- Reduced memory use
- Extended on-site capacity using memory cards in the PDA
- Easily choose between metric and imperial units
- All Surveys saved in separate files
- Extended reporting and exports

The release of the new Leica DISTO™ D3a BT allows the user to take measurements that can be wirelessly and accurately transferred to a PDA! Although OrthoGraph is already compatible with the Leica DISTO™ D8, the new Lieca D3a BT has proven to be a perfect match for gathering real estate data to enter on a PDA, or mobile touch screen device. At half the price of the Leica DISTO™ D8, this new distance meter from Leica and OrthoGraph™ is a must for anyone working in the real estate, construction, architecture, or insurance industries.

The electronic drawing of the ground-plan is made right on the site on the basis of the survey. As an output Orthograph™ supports image file formats as JPG/PNG/GIF/BMP/DWG format. These drawings are compatible with almost all CAD and CAFM systems including AutoCAD and Google SketchUP- As an additional unique opportunity OrthoGraph™ handles the survey data in a BIM model that can be easily imported into ArchiCAD containing all parametric data just besides the drawing.

ArchiCAD and OrthoGraph software together make drawing and editing 3D models even more handy. With the release of ArchiCAD 14 and OrthoGraph 2.0 this is a perfect time to take advantage of these great programs and get ahead of your competitors.

Ends

OrthoGraph™ has new distributor in the UK, for any technical or sales issues please contact:
