## **Stanton Bonna slot drain ensures quick installation on busy road**

***Stanton Bonna has supplied more than 1200 metres of Slot Drain (400mm) for the A2 Bean and Ebbsfleet upgrade, one of the South's busiest roads that links London to the port of Dover.***

Balfour Beatty required an offsite linear drainage product to help reduce project down time and provide a quick, easy, safe installation. The socket and spigot fittings with integrated gasket helped ensure rapid jointing and quick installation.

With the collaboration of Saint-Gobain PAM UK, the high-quality wet cast units were provided with exclusive cast-in ductile iron gratings, hinged to enable rodding access.

The system provided numerous benefits including:

- Safer - less manual handling and wet trades.
- Faster - just in time deliveries to meet program schedule.
- Better - factory controlled consistent quality, tried, tested and trusted.
- Greener - no waste and no waiting around for concrete trucks to arrive.
