## **Steel Line Seats Chosen for Station**

***Sheffield-based stainless steel and special metals fabricator Steel Line Ltd has just completed the manufacture of new platform seating for Sunderland Station. The work formed part of a £7.5m refurbishment by BAM Nuttall Construction.***

The Stand Up range of seats and benches, designed by Wales & Wales, was specified by project architects Sadler Brown Architecture after presentation to Network Rail and Nexus, the joint station operators.

Manufactured in S304/S316 grade options, Steel Line's flagship product is a combination of a bead blasted perforated seat and back with a framework of satin polished flat and curved stainless plates. There are no visible welds, giving the seat a sculpted look.

Stand Up seats and benches can be free standing or easily bolted down to a solid surface and are ideal products for concourses, shopping centres, transport exchanges and railway stations.

The seating is part of a Stand Up suite of furniture which includes bollards, cycle stand and litterbin designs.
