TITON INTRODUCES PIONEERING NEW GENESIS LOCKING HANDLE TO HARDWARE RANGE

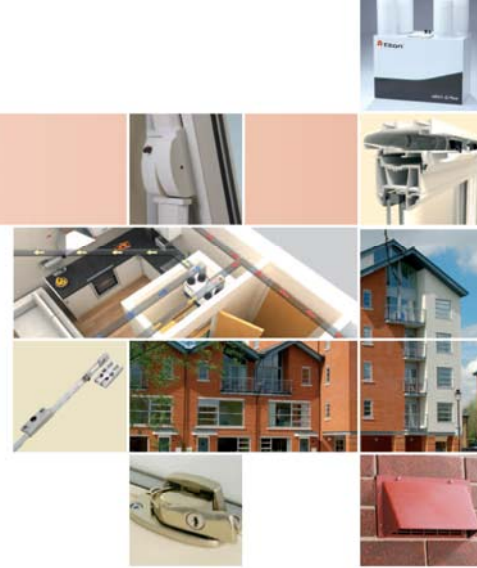

Titon has extended its hardware range with the introduction of the innovative new *Genesis* locking handle and gear box – an attractive and practical option for specifiers and fabricators, for use on sliding folding doors (bi-fold doors). Designed to drive a bi-directional lock on the folds without the risk of key-scratching of profiles, *Genesis* is an effective and functional feature, styled to complement aluminium, timber and PVC door frames rather than detract from them.

The compact *Genesis* locking handle has no visible screws in the closed or open positions in order to maintain a robust yet smooth finished look - while the incorporation of an integral side-entry lock mechanism is intended to avoid any damage to the door profiles caused by keys protruding from lock cylinders. It is available in a range of colours and finishes, including; white, black, gold, satin chrome, polished chrome and stainless steel. For ease of installation, the handle comes complete with fixing screws and spindle. To complement the *Genesis* handle, Titon is also offering an easy to fit bi-parting gearbox, rods and end pieces.

Julian Wiseman, Sales Director (Aluminium) said: “We are delighted to introduce *Genesis*, Titon’s innovative extension to our door locks and handles hardware range, combining top quality manufacturing with versatility. We are confident specifiers and fabricators will find *Genesis* an attractive looking and cost effective option. In addition our knowledgeable and experienced team will be available to answer any questions, offer advice and provide further information as required.”
