Townscape Introduces the Sturdy Nova

Townscape Products Limited has launched the new 120-litre NOVA litterbin, built to last and to withstand the rigours of today's tough environments in urban areas and open spaces.

This high quality side-loading bin, designed to complement the company's Voltan and Metro metal seating, is robust and easy to maintain. All the components are manufactured in the UK and individually zinc treated prior to assembly to prevent rust lines appearing in welded seams after a few years of service. Stainless steel cladding around the apertures prevents unsightly chipping in high impact areas. It also has stainless steel hinges and locks and a stainless steel ring protects even the key entrance to the lock.

The NOVA has four apertures for any approach angle and has a lightweight aluminium liner with two handles for easy side removal. This versatile product can also be supplied as a double bin for excess waste areas or for separating waste for recycling. These double units are back-to-back with a single lid and doors opening at either end with an internal plate for physical separation of waste.

Optional extras include logos, coloured laser-cut lettering and cigarette stubber plates and the NOVA can be powder-coated in 20 standard colours. Smart, practical and robust with a long lifespan, the NOVA litterbin comes in at an economical £320.00 excluding delivery & VAT.

Townscape is a UK manufacturer and supplier of a wide range of street furniture, paving and vehicle defence products. Its furniture can be produced in various materials including cast iron, steel and stainless steel, concrete, timber, polymer, aluminium, plastics and recycled plastic.
