Free VMZINC worldwide projects hardback

To illustrate the diverse ways in which architects throughout the world have used zinc as a façade and roofing material, VMZINC has published a 320-page hardback of project photography.

'From Z to A' contains images of iconic buildings in sectors ranging from ecclesiastical to education.

One of the most notable is the company's own building in Hoboken for which Conix Architects created a curved 'ribbon' concept to entirely wrap it. Products featured include traditional standing seam, interlocking and flatlock panels plus cassettes and shingles in pre-weathered QUARTZ-ZINC®, ANTHRA-ZINC® and PIGMENTO® red, blue and green.
