Introducing the StickyMat System from Warmup

Warmup is revolutionising the heating mat installation process – with a new product that can reduce installation time by 35%.

The StickyMat System was developed by Warmup's Research & Development Centre in response to customer feedback and the company's desire to provide the best products and services.

With the knowledge that time is money and trade professionals are always on the look-out for a better, more efficient way to install [underfloor heating](#), the StickyMat was produced as a way to enable a smaller contractor to install underfloor heating as fast as a larger company.

In an internal testing environment, when using StickyMat against a similar product without pressure sensitive adhesive, the installation of StickyMat was 35% faster – a big difference!

[StickyMat underfloor heating](#) is more than just a standard heating mat; it uses a 1.8mm pre-paced wire with tough fluoropolymer coatings which provide inner and outer insulation for even surface heat distribution. The StickyMat is available in a choice of 150 W/m² and 200 W/m² heat outputs and thirteen different sizes. It is suitable for all projects: new build, retrofits and refurbishments. Once installed you have two options: lay a thin, self-levelling screed over the mat and leave it to dry OR trowel a

full bed of flexible tile adhesive directly over the mat and lay the floor tiles.

Although the installation process is simple, Warmup still offers a market leading 24/7/365 technical support service to give personal advice during and after installation.

In line with Warmup's tradition of offering the best warranties and guarantees, StickyMat comes with a Lifetime Warranty and SafetyNet™ Installation Guarantee. This means if you accidentally damage the system during installation, Warmup will replace it free of charge!
