## GreenBrook Provides the PowerX Whatever the Weather

**GreenBrook now has the solution for all its customers' outdoors needs – whatever the weather - after updating its PowerX Weatherproof Range and adding nine new products.**

Weatherproof to IP66 European standards even with plugs inserted, the new and improved PowerX range includes a choice of two spurs, one with a neon power indicator and the other an RCD spur with illuminating trip indicator. There are four types of socket available within the range: a single 13 amp socket, a twin 13 amp socket, a twin 13amp RCD socket and a timer socket that features a 13 amp socket with mechanical 24-hour timer within a single weatherproof unit. The range also includes a weatherproof electronic seven-day timer with digital display. Finally, the new PowerX Weatherproof Range now also includes a choice of four switches: a one gang, two way switch; a two gang, two way switch; a three gang, two way switch and a four gang, two way switch.

In addition to adding new products, Greenbrook has also updated every unit in the range to provide greater functionality and a more aesthetically appealing appearance. The updated range features a clear cover for easy visibility, simple cable entry at the base and a substantial clip closure to ensure that the lid remains clamped shut while the unit is in use. Able to withstand even the severest weather conditions the new PowerX range is suitable for use in rain, snow and areas where there is pressure hose water spray. The units are even protected against dust contamination and are u/v protected so they will not deteriorate in sunlight.

Explains sales director of GreenBrook, John Bowen, " In the commercial environment IP66 compliant sockets are already in routine use and their specification forms part of any responsible risk assessment. There is a significant demand for them in the domestic market too, with an increasing number of exterior electrical appliances such as hot tubs, water features and, of course, Christmas lights, all calling for safe, reliable outdoor sockets, switches and spurs. That's why we have chosen to introduce such a wide choice of products within the PowerX Weatherproof range so that GreenBrook can offer something for virtually any outdoor application."
