16th December 2008

Ash Construction use the Perimeter Security Site-Guard system

On Tuesday 14th October, Perimeter Security Ltd received a call from Martin Hutchinson of Ash Construction following a break-in at one of their sites in the highly prestigious area of Manor Road in High Wycombe.

Martin explained that thieves broke in and stole not only copper pipe and fittings from the stores area but they also stripped out copper pipe that the plumber had previously installed. Perimeter Security sent an engineer to site that afternoon to carry out a survey.

The engineer explained how the Site-Guard system works and that it could be rented or purchased outright. "I decided to purchase the system outright" says Martin, "I plan to move the system from site to site over the next few years as I will not let this happen to me again."

The quote was approved on Wednesday and Perimeter Security returned to install the full system on Thursday morning.

"I'm so impressed" said Martin, "Perimeter Security are so professional, I thought the engineer would do a survey and disappear again but they actually left me with a working system on loan whilst they prepared the quote"

"I love this system" says Martin. I have full control over it from my mobile phone. I can set and unset it, check the log, change the numbers that the system calls, all from the palm of my hand."

The Perimeter Security Site-Guard system consists of a main control panel, a GSM (mobile phone network) communication module and a range of wire free detectors, sounders and keypads.

The equipment has been designed with the construction industry in mind and has a robust build quality. All of the equipment is wireless and battery powered, the batteries last up to 5 years. The equipment comes with clamp brackets for mounting on to scaffold tube making it very quick to deploy.

In the event of an alarm, the system triggers high output local sounders and uses the GSM module to send its signals over the mobile phone network to the alarm receiving centre where the operators will call the guarding company or key holders.

A 4 zone system with GSM signaling costs just £87.30 per week (plus installation and removal)
