

Press Release
24th November 2009

Phoenix Integral Venetian Blinds make the perfect glazing partner

Integral Venetian blinds are the ideal glazing partner; oblivious to dust, moisture and misuse they provide a unique solution for enhanced privacy and a reduction in sound and solar glare.

Blinds will improve the acoustics by providing an effective sound barrier while at the same time ensuring privacy and a reduction in solar gain.

By controlling the diffusion of natural light, blinds can help to reduce the effect of direct sunlight and heat loss, stabilizing the temperature of the room and reducing the use of excessive artificial light.

Manufactured by Holis Industries, the V2W system has been designed with safety in mind with no external cords, operated simply by a magnetic slider positioned on the glass or electrically by remote control.

Designed to be sealed within a standard glazed unit, the blinds are available in a choice of 18 finishes, including white, silver, black and woodgrain and are suitable for PVC, Aluminum and Timber frames.

Integral blinds are the perfect partner for domestic, commercial and public buildings, improving not only the energy efficiency, light and acoustic values but also providing comfort, elegance and style at minimal cost.
