Rockpanel Introduces Woods Cladding Range

The company's new range of external cladding is designed with the aesthetic characteristics of wood, whilst maintaining the resilience of stone.

Rockpanel introduces a new collection of board material for external cladding with the aesthetic appeal of authentic wood. The 9 new wood tones, for use in facade cladding, are based on oak and ebony, and combine the natural warm radiance and workability of real wood with the durability of stone.

The new Woods collection is an extension of the existing comprehensive range of Rockpanel board material, which consists of many styles and finishes. The new collection effortlessly reflects contemporary trends, such as the use of natural materials, often with a weathered wood look. The colour range of the products has been developed to complement, blend and work with other building materials.

The oak range consists of 5 finishes: Rhinestone, Ceramic, Marble, Slate and Carbon Oak. The finishes vary from a robust natural taupe look, to a grey time-weathered feel. Oak in all its unassailable beauty, with a vibrant grain, ideal for all design effects, from informal, to modern or timeless exclusive designs. The 4 ebony finishes, Slate, Granite, Marble and Limestone, offer a strong grain pattern. The finishes vary from a traditional weathered feel to a tropical brown-yellow look.

Rockpanel board material can be used in any desired format and shape. It is flexible and robust and works well with contemporary trends in building such as organic shapes. They offer an environmentally responsible approach to building cladding. The products are also very cost effective and quick and easy to install. And because they are resistant to weather, temperature and UV, they require very little maintenance and will keep their looks for a long time to come.

Notes to Editors:

A subsidiary company of Rockwool International, Rockpanel produces durable board material made from basalt stone.

The products have been used for many years in a number of countries across Europe and beyond, mainly for exterior cladding in ventilated constructions, in particular for the aesthetic finishing of facades, soffits and fascias, and detailing.

The durability of stone and the workability of wood are combined in Rockpanel products. The products fit effortlessly into sustainable developments such as the passive house, and in addition accommodate contemporary architectural trends such as stratification and organic shapes, with a strong emphasis on costs and installation time.
