Ultracrete Offers Extensive Range of Line Marking Products

Instarmac Group's Ultracrete has a vast array of products and repair systems for highway maintenance.

Ultracrete has over 30 years of distribution, formulation and manufacturing experience in the highways maintenance and repair & refurbishment markets, across the UK. The key to using any great system is the ancillary products available to support it. As well as highway maintenance products, such as our now renowned Ultracrete BBA/HAPAS Approved Ironwork Reinstatement System, we supply high performance ancillaries.

Ultracrete LMP is a solvent based Line Marking Paint ideal as an effective and quick method for line or spot marking in road and pothole repairs, car parks, warehouses, building sites, sports areas, excavation sites, mining, turf marking and landscape sites. The semi-permanent line marking formula is effective for at least 3 months after application under normal wear conditions.

Ultracrete Line Marking Paint is Economical, Contains no chlorinate solvents, is Bio-degradable in dissipation and comes in red, yellow, white and blue.

Ultracrete Instagrip is a skid-resistant (anti-skid) resinous repair system for the patching of anti-skid areas or the reinstatement of anti-skid sections after maintenance work has taken place. It is suitable for the anti-skid patch repair of high friction surfacings typically placed on pedestrian crossings, junctions, footbridges, subways, car parks etc. It is a fast, cost-effective solution for anti-skid applications.

Ultracrete Instagrip Conforms to Highways Works Clause 924, Chapter 6, Specification for the Reinstatement of Openings in Highways, Reduces traffic management time and minimises congestion and is easy to use.

Ultracrete Instaband is a skid-resistant overbading tape that prevents the ingress of water which can cause cracking and severe fretting leading to the eventual breakdown of asphalt and macadam. This polymer modified bituminous tape can be used in addition to the Ultracrete BBA/HAPAS Approved Ironwork Reinstatement System or be applied on its own for the sealing of reinstatement joints and general cracks up to 5mm. Ultracrete Instaband is quick to install, prevents water ingress immediately, contains elastic properties that accomodate thermal movement and is environmentally friendly. This product also Conforms to the Specification for the Reinstatement of Openings in Highways.

Ultracrete Instaline thermoplastic road marking is simple to apply, safe to handle, and offers all the qualities of hot applied thermoplastic line marking within minutes. It is ideal for the reinstatement of small line marking areas on car parks, roads and carriageways etc, after maintenance work has taken place to enable instant road opening. Ultracrete Instaline is essential for finishing of repairs and reinstatements, offering an instant permanent low cost option for small repairs. This product is simple to use with crisp clear and pre-formed markings, and is durable, asphalt and macadam compatible.
